NATOMA TECHNOLOGIES AWARDED 5-YEAR SERVICES CONTRACT BY U.S. GENERAL SERVICES ADMINISTRATION PUBLIC BUILDING SERVICE

SACRAMENTO, CA / ARLINGTON, VA (August 21, 2013) – Natoma Technologies, Inc. (Natoma), announced today that it has been awarded a 5-year prime contract valued up to \$17.5 million by the U.S. General Services Administration (GSA). Under the agreement Natoma will support GSA’s Public Building Service (PBS) needs related to its enterprise-wide electronic Project Management System known as ePM.

Pursuant to the contract, Natoma will provide operations and maintenance services to GSA’s Enterprise Project Management (ePM) system, a web-based project management solution designed to help manage a portfolio of design and construction projects. Specific services delivered under this contract include providing application operations and maintenance, performing system enhancements and upgrades, and technical services to migrate ePM to a cloud-based hosting environment. This task order marks the first contract awarded under Natoma Technologies’ IT Schedule 70.

“Natoma has significant experience executing complex project management, system transition, custom development, system integration and on-going enhancement efforts in the public sector space,” said Martin R. McGartland, President and CEO of Natoma Technologies. “We are pleased to be selected by GSA to support this important system and help transition ePM to a next-generation cloud environment. Since opening our federal practice in January of this year, this win solidifies our commitment to the federal market and will provide a foundation to expand our presence in the Washington DC area.”

Natoma Technologies will provide comprehensive oversight and support for all aspects of ePM with assistance from Runding Corporation, a technology consulting firm focused on integrating and implementing complex design and construction management solutions, and an expert in Meridian Proliance Software, the COTS foundation ePM is built on.

“The Natoma-Runding team is highly-experienced at successfully leveraging a broad array of technologies and provides the project management and Proliance®-specific expertise needed for this project’s success,” McGartland said, “We look forward to forging ahead with this partnership and advancing GSA PBS’s IT needs in the federal space.”
